

has also led us to think about the possibility of working in the Mainland for conservation. Lastly, this was no ordinary field study trip. Together, we've been through a whole array of new experiences, from tasting hairy vegetables to the joy of learning about new species and seeing the innocent smile of a village child. There is simply just way too much to tell. The trip was an experience of a lifetime for all of us.

Box 1

Wofoo Social Enterprises (WSE)

Wofoo Social Enterprises (WSE), chaired by Mr. Joseph Lee, BBS, JP, gained momentum in the 1990s as a pioneer in advocating and supporting not-for-profit models of social services. WSE believes in the benefits of an entrepreneurial approach to providing social services because of its emphasis on customer-care and focus, efficiency and innovation - only through such manner can limited resources be mobilized and shared to meet the increasing demands of society. In parallel, WSE inspires individuals and organizations from different walks of life, sectors and groups, to contribute to Hong Kong's social services. On this common platform and joint belief, WSE can join hands with many to enhance "*Harmony amongst people to Build Prosperity of our Home and Country*", to illustrate the principle of "socializing social service."

After years of gestation, WSE is striving for further development based on its solid foundation of services in areas of Youth Development, Education, Elderly Care, Humanitarian Services, and Strategic Partnership. At present, the WSE Family includes Wofoo Foundation, Chinese Youth Exchange Centre (Hong Kong), Hong Kong Youth Institute, Warehouse Teenage Club, School of Continuing Family Education, Beijing International Committee for Chinese Orphans, Civic Heritage, W F Joseph Lee Primary School and Grace Nursing Home (Kowloon Tong and Tak Tin). W F Joseph Lee Primary School became the first primary school operating on the Direct Subsidy Scheme in the New Territories when it first admitted students for Fall 2002. Furthermore, Grace Nursing Home (Tak Tin) established another milestone for WSE and Hong Kong's social services when it became the first private sector operator of a Social Welfare Department tendered home in 2004.

Heading towards the future, WSE will continue to fulfill its corporate citizen duties and contribute to building a harmonious society and country by uniting societal energies, and providing social services of high quality.

Kadoorie Farm & Botanic Garden - wildlife updates & sightings

by Gary Ades, Roger Kendrick,
Amanda Haig, Alex Grioni & Captain
Wong

Wildlife recording, surveys and rehabilitation at Kadoorie Farm & Botanic Garden (KFBG) have produced a number of interesting and unusual records since March 2005. In this report, KFBG Fauna staff provide some of the highlights of their findings.

General wildlife sightings are posted on the KFBG Wildlife Sightings Board on a fortnightly basis, with records provided by staff and visitors. Many records are generated by the Security team on night shifts.

(1) The following sighting records from Kwun Yum Shan (KYS) and elsewhere in KFBG (Fig. 1) were posted between April and September 2005:

April 05

- 4 April, a bamboo snake at the Apiary.
- 7 April, three young wild boar piglets at Sign Post Corner.
- 15 April, two porcupines at the new Deer Haven.
- 21 April, a many banded krait snake near Great Falls arch.
- 30 April, a leopard cat above the Norman Wright Chicken Display

June 05

- 3 June, a group of rhesus macaque monkeys at Sign Post Corner.
- 11 June, a Chinese cobra near the Twin Pavillion.
- 12 June, three wild boar near Magnolia Falls.
- 18 June, a barking deer at the Butterfly Garden.
- 24 June, a rhesus macaque at the Native Tree Nursery.
- 27 June, several golden birdwing and common rose butterflies at the Butterfly Garden.
- 28 June, several golden birdwing, common rose and plain banded awl butterflies at the car park by Reception.
- 30 June, a common rat snake at the Native Tree Nursery.

July 05

- 9 July, a common wolf snake at Main Gate Security Cabin; several Indian moon moths (*Actias selene*) at KYS & Misha's Bungalow (Fig. 2).
- 13 July, a group of baby rhesus macaques below the Upper Canteen.
- 18 July, a small Indian civet at Magnolia Falls.
- 22 July, five wild boar piglets at Great Fall arch.
- 23 July, a mother wild boar with 8 piglets at the composting area.

嘉道理農場暨植物園 KADOORIE FARM AND BOTANIC GARDEN

- 1 接待處 Reception
- 2 生態園 Eco-garden
- 3 有機耕作示範 Organic Farming Display
- 4 溫室 / 蘭花溫室 Greenhouses / Orchid Greenhouse
- 5 植物保育實驗室 / 植物標本室 Plant Conservation Laboratory / Herbarium
- 6 農產品售賣處 Farm Produce Sales Counter
- 7 行政辦公室 Administration Offices
- 8 豬舍 Pigties
- 9 野豬之家 Wild Boar Display
- 10 鯽魚園 Kwun Yum Garden
- 11 猛禽飛行園 Raptor Flight Aviary
- 12 本土哺乳動物園 Native Mammal Display
- 13 兩棲及爬行動物館 Amphibian and Reptile House
- 14 淡水生態館 Streamlife Display
- 15 葛先生紀念花園 Walter Kerr Memorial Gardens
- 16 昆蟲館 Insect House
- 17 鸚鵡護理中心 Parrot Sanctuary
- 18 孔雀飼養區 Peafowl Enclosure
- 19 水鳥園 Waterfowl Walkthrough
- 20 生態池塘 Wildlife Pond
- 21 辦公室 / 保育大樓 Offices / Conservation Building
- 22 職員飯堂 Staff Canteen
- 23 人工濕地污水處理系統 Constructed Wetland Wastewater Treatment System (CWWTs)
- 24 堆肥區 Composting Area
- 25 野生動物拯救中心 Wild Animal Rescue Centre (WARC)
- 26 鹿苑 Deer Haven
- 27 有機菜園 Organic Vegetable Terraces
- 28 諾曼·萊特紀念雞舍及展覽中心 The Norman Wright Memorial Chicken Display
- 29 艾先生猛禽護理中心 The Jim Ades Raptor Sanctuary
- 30 果園 Orchards
- 31 直升機坪 Helicopter Pad
- 32 米加克屋 Miha's Bungalow
- 33 大瀑布及彩虹亭 Great Falls and Rainbow Pavilion
- 34 蜜蜂園 Apiary
- 35 修女花園 Convent Garden
- 36 蕨類植物小徑 Fern Walk
- 37 蝴蝶園 Butterfly Garden
- 38 四柱擎天 Post Office Pillars
- 39 中藥園及茶園 Medicinal Herb Garden and Tea Garden
- 40 黃金亭 Golden Pavilion
- 41 世界主要城市之指示牌 Signpost Corner
- 42 蘭花亭 Orchid Haven
- 43 「農林綜合系統」實驗場地 Agroforestry Test Site
- 44 葛先生橋、龍亭及小瀑布 Kerr's Bridge, Dragon Pavilion and Little Falls
- 45 嘉道理兄弟紀念亭 The Kadoorie Brothers' Memorial Pavilion
- 46 胡振生先生紀念亭 The T.S. Woo Memorial Pavilion
- 47 所羅路 Enkianthus Walk
- 48 古祭壇及熱氣粥 Ancient Altars and Hot Pots
- 49 鯽魚山頂峰 Kwun Yum Shan Summit
- 50 野生動物拯救中心延伸設施 WARC Extension
- 51 辦公室/植物標本室 Offices / Herbarium and Specimen Room

- 30 July, a mountain wolf snake near KARC road junction (Fig. 3).

Fig. 2. Common wolf snake (Photo: KFBG Security Team), July 2005.

Fig. 3. Mountain wolf snake (Photo: KFBG Security Team), July 2005.

August 05

- 5 August, three porcupines at Magnolia Falls.
- 8 August, a small Indian civet at the Upper Canteen.
- 26 August, a baby python at KYS and a Chinese water snake at the Norman Wright Chicken Display.
- 28 August, two porcupines on the road above Misha's Bungalow and one porcupine below the Norman Wright Chicken House road.
- 29 August, a mother wild boar with 5 piglets at the Apiary.

September 05

- 5 September, three porcupines at the new Deer Haven.
- 11 September, a king cobra below the Twin Pavilion.
- 16 September, a masked palm civet at Signpost Corner; several male birdwing butterflies flying in the Butterfly Garden and a constable butterfly patrolling the summit of KYS; one adult wild boar and four piglets at the Upper Canteen.
- 18 September, a mother wild boar with five piglets near Misha's Bungalow.
- 27 September, a Chinese cobra near the Upper Canteen.

(2) Fauna Conservation Department Project News:

The monthly moth survey [RK] has been affected by poor weather on scheduled recording nights. Only on three evenings (in April, July and September) were recordings possible. April was not special in terms of unusual species. The recording on July 9, timed to coincide with the National Moth Night in the United Kingdom [1], resulted in 261

species being seen. Amongst the more interesting observations were a third Hong Kong record of *Calletaera postvittata* (Walker, 1861) (Geometridae, Ennominae), a couple of unusual species like *Warreniiplema fumicosta* (Warren, 1896) (Fig. 4) (Uraniidae, Epipleminae), the probably undescribed *Chiasmia* sp. indet. near *triangulata* (Fig. 5) (Geometridae, Ennominae), and the following species thought to be endemic to Hong Kong: *Sigilliclystis kendricki* Galsworthy, 1999 (Fig. 6) (Geometridae, Larentiinae); *Ogla stygiana* Galsworthy, 1997; *Pangrapta bicornuta* Galsworthy, 1997; *Pangrapta roseinotata* Galsworthy, 1997; *Ugia purpurea* Galsworthy, 1997 (all Noctuidae, Calpinae); *Athetis hongkongensis* Galsworthy, 1997 (Noctuidae, Hadeninae) and *Luceria striata* Galsworthy, 1997 (Noctuidae, Strepsimaninae). In September several new species to Hong Kong were recorded; these were all small species whose identities are still being determined by microlepidoptera specialist M.J. Sterling in the U.K.

Fig. 4. *Warreniiplema fumicosta* (Photo: Roger Kendrick).

Fig. 5. *Sigilliclystis kendricki* (Photo: Roger Kendrick).

An additional moth record was made by AG of a mating pair of atlas moths (*Attacus atlas*) on September 16 at the WARC. This species (Fig. 7) is regularly recorded at KFBG, with adults seen in April, July and from late August through early October. The dramatic larvae are occasionally seen feeding on *Cinnamomum camphor* and *Ilex rotundifolia*.

Fig. 6. *Chiasmia* sp. indet. near *triantulata* (Photo: Roger Kendrick).

(3) Wild Animal Rescue Centre (WARC) – update

Interesting animal acceptances at the WARC include:

A juvenile Cuckoo had both the WARC team and local ornithologists guessing as to its correct identification. It is believed that it is in fact a Lesser Hawk Cuckoo (*Cuculus poliocephalus*) (Fig. 8). The bird had suffered minor injuries from what appeared to be a predator attack. Once recovered the bird was subsequently I.D. ringed and released. Feathers were taken for future DNA analysis.

A Crested Serpent Eagle was received with a fractured pelvis and is expected to make a full recovery. The bird was struck by a cross border truck on Sha Tau Kok Road. Fortunately for the bird, the driver stopped and reported the incident immediately to the AFCDD so that the bird could be rescued.

A pair of juvenile Black Bazas (*Aviceda leucophotes*) (Fig. 9) were found at Sham Shui Po Market. The origin of the birds is unknown but both were found with leg chains attached indicating that they were perhaps intended to be used for illegal falconry or the pet trade.

Fig. 8. Lesser hawk cuckoo prior to release at KFBG (Photo: Leo Ko)

Fig. 9. The juvenile black baza (Photo: Gary Ades).

Animal rehoming to organisations involved in captive breeding & conservation projects for those species included:

Siamang Gibbon (*Hylobates syndactylus*) was sent to Melaka Zoo, Malaysia in April 2005.

2 Spotted Linsangs (*Prionodon pardicolor*) were sent to Taiping Zoo, Malaysia, in May 2005.

2 Malaysian Painted River Turtle (*Callagur borneoensis*) were sent to Fuengirola (Malaga) Zoo, Spain in June 2005.

7 Malaysian Box Turtle (*Cuora amboinensis*) were returned to the AFCDD HK in July & August, for education programmes.

Below is a list of some of the animals received since February 2005 and that have been successfully rehabilitated and subsequently released (Fig. 10 & 11).

SPECIES	LOCATION FOUND	RELEASE DATE	RELEASE LOCATION
REPTILES			
Chinese Softshell Turtle <i>Pelodiscus sinensis</i>	Lam Tsuen	06.04.05	Nam San Wai
RAPTORS

Fig. 10. Black-eared kite chick after being returned to its nest in Aberdeen Country Park (Photo: Leo Ko).

In June 2005, WARC staff were called on a number of occasions to deal with bats that had apparently been washed out of their roof roosts during heavy rain. A bat box was produced and erected near to the roost site to help place bats back in a dry environment. This had limited success, as some bats were young and were not being cared for by adults. It would be interesting to know how widespread this phenomenon is during torrential rain.

South East Asian Lepidoptera
Conservation Symposium
Hong Kong 2006

Between 4 and 8 of September 2006, KFBG will host the first South East Asian Lepidoptera Conservation Symposium. Unlike Europe, the Americas and Africa, there has been no regional or continental approach to the conservation of butterflies and moths in South East Asia. There exist various bodies at national and local levels, almost all non-governmental, that undertake conservation measures of some sort, and to varying degrees. By bringing such bodies together, an overall assessment of the state of Lepidoptera conservation in the region can begin.

The symposium is intended to bring together conservationists, academics, field workers, traders and natural history enthusiasts, to identify and agree upon regional conservation strategies and actions through a practical series of talks and workshops. The possibility of setting up a regional Lepidoptera conservation umbrella body will be explored.

Anyone interested in participating in the symposium should contact the Fauna Conservation Department at fauna@kfbg.org. Further information on the symposium is available on-line [2].

BOOK REVIEWS

A Field Guide to the Amphibians of Hong Kong

by Agriculture, Fisheries and Conservation Department (AFCD), 212 pages, softcover. Friends of the Country Parks and Cosmos Books Ltd., 2005.

This is the latest in a series of field guides to local fauna produced by AFCD, and is the first dedicated solely to Hong Kong amphibians (but do not be taken in by the disingenuous claim on the inner sleeve that this is the first comprehensive text on the amphibians of Hong Kong: the Urban Council's *Hong Kong Amphibians and Reptiles*, co-written by Hong Kong's leading herpetologists, was equally comprehensive, at least in the second edition (1998), and broke considerably more new ground than the current guide). It is a misfortune, therefore, that the formatting and layout of much of the book have departed so waywardly from the staid, sensible approaches adopted in AFCD's other recent field guides to dragonflies, butterflies and freshwater fish. Some hooligan at AFCD or Cosmos Books has been handed a profusion of frog photographs, drawings, snippets of text and an early version of Photoshop, and instructed to do their worst with it. What a migraine-inducing dog's dinner he or she has come up with.

Did I say "dog's dinner"? That is perhaps a little harsh. The book divides into five parts, of which the first three ('Introduction', 'Knowing More About Amphibians', and 'Observing Amphibians in the Wild') are relatively easy on the eye and do not induce any kinetic psychosis in the reader (although the mind does boggle somewhat at the assertion, made in the introduction, that amphibians evolved a mere forty million years ago, which would place their emergence considerably later than the demise of the dinosaurs which evolved from them; it is to be hoped that this misprint will be corrected in the second edition).

The field guide portion of the book, however – Part Four - is cluttered with a ghastly, clamorous jumble of overlapping amphibian photographs printed in oval-shaped frames or, even more jarringly, with the backgrounds entirely removed. Each
