

<b>Course Title/Code:</b>	<b>Research Seminars in Obstetrics and Gynaecology (MMPH6147)</b>
<b>Department:</b>	Obstetrics & Gynaecology
<b>Objective:</b>	The research seminars on Obstetrics and Gynaecology provide students with a broader understanding of research in obstetrics, reproductive medicine, gynaecology and oncology.
<b>Content:</b>	The research topics are the most up-to-date research areas in obstetrics and gynaecology. Many of the cutting-edge techniques (e.g. primary cell/cancer cell manipulation, gene-transfer and manipulation, ES cell cultures, genomic and epigenetics techniques) will be used to study basic scientific/medical question in different research areas. Special features of this course include 2 lectures on (1) how to clearly present your research work; (2) how to read and write biomedical Research and review papers; and 2 hour oral presentations of his/her own research work.
<b>Learning outcomes:</b>	On completion of the course, the students are expected to <ul style="list-style-type: none"> <li>• formulate hypothesis and use different cutting-edge technique to address the basic scientific/biomedical questions</li> <li>• understand the relevant research topics in obstetrics, reproductive medicine, gynaecology and oncology</li> <li>• present their research findings clearly and systematically</li> </ul>
<b>Prerequisite:</b>	BSc or medical graduate
<b>Duration:</b>	Two semester, 2 hours/month, 20 contact hours, 4 hours lectures and presentations
<b>Assessment:</b>	60% continuous assessment (attendance and discussion) 20% presentation 20% abstract and review writing
<b>Remarks:</b>	Also offered to RPg from other Faculties at HKU. Prior approval from the Department of Obstetrics and Gynaecology must be sought
